

SheikhGo AI Fleet Operations Platform

The Next Generation Intelligent Fleet Ecosystem

Enterprise · Government · Investors · Logistics · Fleet Operators

Where we are

- Multi-tenant fleet and travel operations ERP
- Live GPS, maintenance, notifications, compliance
- Web command center plus mobile field apps
- Production-ready for regional operators

Where we are going

- AI-augmented decisioning across the fleet
- Predictive maintenance and fleet health
- Copilot for dispatch, managers, and executives
- Regional expansion with Vision 2030 ambition

Executive Summary

Available Today

Web + Mobile

Control surfaces

Shared-schema

Tenancy

SignalR

Realtime

Vision path

AI maturity

- SheikhGo is a multi-tenant Fleet and Travel Operations Platform — not a single-purpose GPS tool
- One system for office (Angular ERP) and road (Flutter apps) on a shared ASP.NET Core API
- Core pillars live today — fleet, GPS (Traccar), maintenance, bookings, notifications, security and audit
- AI layer is the next-generation differentiator — Settings and Copilot hooks exist; full engines are Vision
- Built for enterprise tenants, government-grade control, and regional scale

Mission & Vision

Mission

- Give fleet and travel operators a single intelligent system for vehicles, drivers, trips, and customers
- Replace WhatsApp, spreadsheets, and fragmented GPS with structured, auditable operations
- Deliver realtime visibility from the office to the road

Vision

- Become the leading AI Fleet Operations Platform for South Asia, the GCC, and emerging markets
- Turn every notification, trip, and maintenance event into actionable intelligence
- Power safer fleets, lower cost-per-km, and executive-grade decision support

Why SheikhGo

Available Today

- Unified platform — fleet, travel, GPS, maintenance, and notifications in one tenant
- Role-first design — Super Admin, Tenant Admin, Fleet, Dispatcher, Driver Manager, Driver
- Enterprise foundations — JWT permissions, audit center, security settings, multi-branch scoping
- Field-ready mobile — trips, GPS, attendance, fuel, inspections, SOS, offline sync
- Honest AI roadmap — evolve Notification Center and dashboards into a true intelligence layer
- Regional fit — EN/AR readiness and operator workflows for Pakistan and GCC markets

Global Fleet Management Market

Indicative

\$24–45B Market size (2025) Scope varies by report	11–19% Typical CAGR Through early 2030s	~\$32B Software (2025) Fleet mgmt software	Telematics · AI Key drivers Cost and compliance
---	--	---	--

- Growth driven by telematics, IoT, fuel optimization, and regulatory compliance
- Asia-Pacific among the fastest-growing regions
- Software platforms capturing share from hardware-only tracking

Indicative ranges — TBRC/GII, Data Bridge, Fortune Business Insights, Maximize, Research Nester (2025–2026).

Middle East & GCC Opportunity

Indicative

Regional signals

- MEA fleet management software ~\$1.9B (2025, indicative)
- GCC software market ~\$0.77B (2025, indicative)
- Government tracking mandates and smart-city logistics programs
- Large oil and gas, construction, and logistics fleets

Why it matters for SheikhGo

- Demand for multi-tenant SaaS with strong admin and audit
- Preference for platforms that unify ops — not GPS alone
- Arabic-ready UX and regional operator workflows
- Partner opportunity with tracker manufacturers and telcos

Indicative — Fortune Business Insights MEA/GCC software estimates (2025).

Pakistan Market Opportunity

Indicative

Fragmentation

Buyer pain

Scale & compliance

Buying trigger

All-in-one ops

SheikhGo fit

Pilot !' expand

Go-to-market

- Rapid growth in logistics, fleet rental, corporate transport, and intercity travel operators
- Fragmented tooling today — WhatsApp dispatch, Excel compliance, basic GPS portals
- Strong appetite for integrated ERP-style fleet systems with local support
- Opportunity to become the default operations platform for mid-to-large fleets
- Natural beachhead before GCC and wider South Asia expansion

Digital Transformation in Transportation

- Operators moving from voice/chat dispatch to structured bookings and trip lifecycle
- Digitization of fuel, inspections, attendance, and document compliance
- Realtime maps and geofences becoming table stakes for enterprise buyers
- Auditability and role-based access required for corporate and government tenders
- Mobile-first field execution expected alongside a web command center

Industry direction

- Alert fatigue !' prioritized, contextual notifications
- Reactive maintenance !' predictive work orders
- Static reports !' recommendation-driven ops
- Manual dispatch !' assisted assignment and ETA intelligence

SheikhGo posture

- Notification Center shipped today (Available)
- AI Settings and Copilot client hooks (Partial)
- Decision Engine, Health Score, Predictive Maintenance (Vision)
- Learning loop across fleet events (Vision)

Business Opportunity

- Sell a platform subscription — not a tracker SKU
- Expand wallet share with modules — GPS, maintenance, travel, AI add-ons
- Serve operators, rental companies, corporates, and government fleets
- Partner with GPS manufacturers as the intelligence layer above hardware
- Build durable SaaS revenue with multi-tenant deployment and professional services

Current Industry Problems

Typical today

- WhatsApp / phone dispatch
- Spreadsheet vehicle and driver lists
- Standalone GPS portals
- Paper fuel and inspection records
- Weak change history
- Alerts without prioritization

With SheikhGo

- Structured bookings and trip lifecycle
- Vehicles and drivers in ERP
- Live map and geofences in the same system
- Digital evidence with photos and audit
- Security and Audit Center
- Notification Center with retention and channels

Notification Overload

- GPS systems generate high volumes of speed, geofence, ignition, and device alerts
- Without priority and context, managers ignore or mute channels
- Critical safety events get buried under routine noise
- SheikhGo ships a Notification Center with preferences, templates, and lifecycle
- Vision — AI Smart Notification Engine that scores, suppresses, and escalates intelligently

Rising Fleet Costs

Route & idle loss Fuel waste	Unplanned repair Downtime	Docs & licenses Compliance fines	Manual process Labor leakage
--	-------------------------------------	--	--

- Fuel, maintenance, insurance, and idle time dominate cost-per-km
- Lack of unified data makes savings hard to prove to finance
- Predictive and KPI-driven ops (Vision) amplify savings already available from visibility today

Manual Operations

- Dispatch, attendance, fuel logging, and compliance still rely on human chasing
- Errors and disputes increase without digital evidence
- Scaling fleet size without process redesign multiplies chaos
- SheikhGo digitizes core workflows on web and mobile — foundation for automation

Lack of AI

- Most regional GPS tools stop at maps and raw alerts
- Few platforms connect maintenance, drivers, trips, and notifications into one intelligence model
- Executives lack a fleet health score and prioritized recommendations
- SheikhGo AI roadmap closes this gap on top of a real operations backbone

Competitive Gaps

Category leaders

- Samsara / Motive — strong telematics, global enterprise
- Verizon Connect — mature North American footprint
- Fleetio — maintenance-centric software
- Traccar — open GPS engine (hardware-agnostic)

White space for SheikhGo

- Unified travel, fleet, bookings, and ERP admin
- Multi-tenant platform built for regional operators
- Government-friendly audit and RBAC depth
- AI layer as product story — not bolt-on analytics
- Partner-ready above Traccar and device OEMs

Platform Overview

Available Today

- ERP web command center (Angular)
- ASP.NET Core API — MediatR, Dapper, SQL Server
- Flutter apps — Driver and Fleet field execution
- Traccar GPS · SignalR realtime · optional Redis

Fleet Management

Available Today

- Vehicle inventory, register wizard, documents, GPS binding
- Driver inventory, licenses, assignments, incidents
- Fleet dashboard with KPIs and attention widgets
- Compliance and inspections foundation
- Branch and department scoping for multi-site operators

Vehicle Rental

Available Today

- Vehicle lifecycle supports rental and ops fleets in one register
- Assignments and availability visible to dispatch and managers
- Document and compliance tracking for rental readiness
- Extensible toward dedicated rental commercial modules

Travel & Transport

Available Today

- Customers, routes, bookings, and payments
- Pricing flows and invoice-related UI
- Trip lifecycle connected to vehicles and drivers
- Fuel logs and driver allowance rules
- Reports export patterns (Excel / PDF)

GPS Tracking

Available Today

- Live map with vehicle focus and history playback
- Trip analytics, filters, KPIs, export, and route replay
- Device register, install, transfer, and commands
- Geofences with map editing
- Alerts and GPS analytics / report schedules
- Traccar integration with adaptive sync and SignalR-primary clients

Driver Management

- Driver profiles, licenses, documents, and status
- Assignment board / calendar to vehicles
- Mobile driver app — trips, attendance, fuel, inspections, SOS
- Driver Manager hub — ranking, performance, violations
- EN/AR i18n and offline outbox for field reliability

Maintenance

Available Today

- Service requests, work orders, schedules, history
- Spare parts inventory — stock, issue, transfer
- Workshops and vendors
- Maintenance reports catalog, preview, and schedule dialogs
- Foundation for predictive maintenance (Vision)

Notification Center

Available Today

- In-app inbox with tabs, compose, preferences, templates
- SignalR realtime delivery
- Email channel (SMTP) and dispatch worker
- Retention, archive, and soft-delete lifecycle
- SMS / Push / WhatsApp — config-gated / evolving

AI Smart Notification Engine

- Ingest events from GPS, maintenance, trips, and security
- Score severity, suppress duplicates, escalate by role
- Prefer channels by preference and urgency
- Built atop today's Notification Center

AI Decision Engine

Vision / Next-Gen

- Correlate fleet signals into recommended actions
- Suggest dispatch, maintenance, and compliance next steps
- Explainability for managers and auditors
- Human-in-the-loop approvals

Fleet Intelligence

- Utilization, idle, route efficiency, and cost signals in one model
- Attention lists for vehicles needing intervention
- Cross-module insights — GPS × maintenance × trips
- Feeds executive dashboards and Copilot

Driver Intelligence

- Safety and performance scoring from trips and violations
- Coaching prompts for Driver Managers
- License and compliance risk forecasting
- Fair, transparent metrics for operations

Predictive Maintenance

- Combine service history, odometer, and fault patterns
- Forecast work orders before failures
- Optimize parts and workshop load
- Extends the shipped maintenance module

Fleet Health Score

- Single 0–100 score per vehicle and fleet
- Blends compliance, maintenance, GPS health, and utilization
- Partial health widgets exist on mobile Command Dashboard today
- Full scoring engine remains Vision

AI Copilot

Vision / Next-Gen

- Conversational assistant for fleet questions and next actions
- Flutter AI chat client and ERP AI hooks already present (Partial)
- Grounded answers from tenant fleet data — not generic chat
- Role-aware — dispatcher vs executive vs driver manager

AI Management Center

Vision / Next-Gen

- Configure providers, capabilities, and guardrails (Settings !' AI exists)
- Monitor model usage, recommendation acceptance, and alert quality
- Tenant-level enablement for enterprise control
- Audit trail for AI-assisted decisions

AI Learning Engine

- Feedback loop from accepted / rejected recommendations
- Per-tenant learning with privacy boundaries
- Improves notification scoring and maintenance forecasts over time
- Continuous evaluation for enterprise trust

Now	Next	Later
• Notification Center • AI Settings • Copilot client hooks • Dashboard AI blurbs	• Smart notification scoring • Health score v1 • Copilot grounded Q&A • Maintenance risk flags	• Decision Engine • Predictive WO generation • Learning loop • Executive AI briefings

System Architecture

Available Today

- Users !' SheikhGo ERP / Mobile !' HTTPS API
- SQL Server · Redis (optional, fail-open) · Traccar · SMTP / channels
- SignalR for notifications and GPS-related realtime

Clean Architecture (.NET)

Available Today

- ASP.NET Core API with MediatR handlers
- Dapper data access and clear module boundaries
- Domain-aligned fleet, GPS, notifications, platform admin
- Documented coding standards and PR quality bars

Microservices Roadmap

Today	Evolve	Scale
• Modular monolith API • Clear module boundaries • Shared tenancy and auth	• Extract high-load GPS ingest • Independent notification workers • Bounded context services	• Azure containers • Independent deploy cadence • Event-driven integration

Azure Deployment

Available Today

- Cloud-ready .NET stack for App Service / containers
- SQL, Redis, storage, and Key Vault patterns
- Environment-based configuration for UAT and production
- Path to sovereign / government cloud placements

Security Architecture

Available Today

- JWT authentication with fine-grained permissions
- Security Center — password age, lockout, session idle, audit level
- Audit Center — searchable events, retention, CSV export
- Tenant isolation on shared-schema TenantId model
- Role templates for platform and fleet personas

Multi-Tenant Design

Available Today

- Shared-schema multi-tenancy with TenantId isolation
- Tenant provisioning — profile, branding, billing fields, logo/slug
- Modules, features, and subscriptions at platform level
- Branch and department scoping inside a tenant

Notification Architecture

Available Today

- Compose !' preferences !' dispatch worker !' channels
- SignalR hub for in-app realtime
- Email via SMTP; SMS/Push/WhatsApp gated
- Retention policy and cleanup job
- Vision path into AI Smart Notification Engine

Mobile Architecture

Available Today

- Flutter Driver and Fleet apps on shared production API
- JWT refresh, RBAC shells, role-first navigation
- Hive offline outbox, SignalR, FCM, biometric lock
- EN/AR i18n; store release assets and checklists

Analytics Dashboard

Available Today

- Fleet, GPS, trip, and maintenance analytics surfaces
- Filters, KPIs, and export patterns
- Report schedules for recurring stakeholder packs

KPI Dashboard

Available Today

- Vehicles active, trips, alerts, maintenance backlog
- Role-based widgets on web and mobile Command Dashboard
- Attention lists for vehicles needing action

Cost Optimization

- Visibility into fuel, idle, and maintenance spend drivers
- Reduce waste with trip analytics and geofence discipline
- Digitize inspections and documents to cut compliance risk
- Vision AI recommendations prioritize highest-ROI interventions

Executive Reports

Available Today

- Excel / PDF export patterns across fleet and ops modules
- Scheduled GPS and maintenance report packs
- Audit exports for governance and tenders
- Board-ready narrative — pair with flagship KPIs

AI Recommendations

- Ranked actions — maintain, reassign, coach, investigate alert
- Tied to Fleet Health Score and notification priority
- Acceptance tracking feeds the Learning Engine
- Partial recommendation surfaces exist on dashboards today

Pricing Strategy

Indicative

- Tiered SaaS by fleet size and module pack (Core Ops · GPS · Maintenance · AI)
- Per-vehicle / per-tenant hybrid pricing for mid-market and enterprise
- Implementation and training professional services
- Optional premium support and dedicated environments

Customer Segments

- Logistics and distribution fleets
- Travel and transport operators
- Vehicle rental companies
- Corporate and industrial fleets
- Government and municipal transport
- GPS tracker manufacturers seeking a software layer

Revenue Model

- Land with Core Ops + GPS; expand into Maintenance and AI Vision packs
- Multi-year enterprise agreements for government and large logistics
- Channel revenue with device OEMs and system integrators

Competitive Comparison

Global telematics

- Deep hardware and camera ecosystems
- Strong in NA / EU enterprises
- Higher cost and complexity
- Less travel/booking ERP depth

SheikhGo advantage

- Unified fleet and travel operations ERP
- Multi-tenant regional SaaS design
- Traccar-friendly / OEM-agnostic GPS layer
- Honest AI roadmap on a shipped backbone
- Fit for Pakistan !' GCC expansion

Why SheikhGo Wins

- Category reframe — AI Fleet Operations Platform, not GPS software
- Breadth — admin, ops, GPS, maintenance, notifications, mobile
- Trust — audit, RBAC, security settings for enterprise buyers
- Path — Available today, Vision AI as credible roadmap
- Region — built for operators who need local fit and full ops

ROI for Customers

Indicative

!“ 30–50% Alert noise With smart priority (Vision)	!“ 5–15% Fuel & idle Via visibility and discipline	!“ 20–40% Admin time Digitized workflows	!“ targeted Downtime Predictive path (Vision)
---	---	---	--

- ROI combines Available process gains with Vision intelligence upside
- Pilot measurement plan — baseline 30 days, then module expansion

Illustrative ranges for business cases — validate per fleet during discovery.

Vision 2030

- SheikhGo as the default intelligent fleet OS for regional operators
- AI Copilot embedded in every manager and executive workflow
- Predictive maintenance and health scores as standard operating practice
- Deep OEM and government partnerships across South Asia and the GCC

Global Expansion

- Phase 1 — deepen Pakistan reference fleets
- Phase 2 — GCC enterprise and government programs
- Phase 3 — wider emerging markets with partner-led delivery
- Localization, compliance packs, and sovereign cloud options

AI Ecosystem

Vision / Next-Gen

- Event fabric from GPS, ops, maintenance, and mobile
- Decision, notification, and learning services
- Copilot and Management Center as control planes
- Partner models and industry datasets over time

Product Roadmap

2026	2027	2028+
• Harden Available platform • Smart notifications v1 • Health score v1 • Copilot grounded answers	• Predictive maintenance • Decision Engine • Deeper Flutter role shells • Partner OEM packs	• Learning Engine at scale • Microservices extraction • GCC government suites • Ecosystem APIs

Investment Opportunity

- Category-defining product in a high-growth fleet software market
- Shipped multi-tenant platform reduces build risk vs pure greenfield AI
- Clear expansion path — modules, AI packs, geography, partners
- Use of funds — AI engines, enterprise sales, GCC GTM, scale engineering

Thank You

SheikhGo AI Fleet Operations Platform

Sheikh Travel Group

Run the office on the web. Run the road on mobile. Grow with Vision AI.
